

PRODUCT DATASHEET

IGNYTE ASSURANCE PLATFORM™

MODULES AND USE CASES

Systematize, integrate, and assure corporate cybersecurity activities across the enterprise.

THE NEXT ERA OF CYBER ASSURANCE

For over a decade, organizations have focused on managing security issues primarily through risk and compliance management. Ignyte offers a radically different approach by bringing cyber assurance to the forefront of executive stakeholder. We integrate assurance into the risk management equation. Ignyte becomes part of corporate governance and provides management accurate and current information to stakeholders about the efficiency and effectiveness of cyber programs.

AT A GLANCE

- **Data Consistency:** Visibility and governance of processes, policies, controls, risk and maturity models on a single platform.
- **Agile:** Rapid creation of dashboards and engagement reports for any part of the enterprise.
- **Asset Reuse:** Integrate with pre-existing internal and external systems to deliver a single enterprise view.
- **Flexibility:** SaaS or on-prem consumption models as your needs dictate.
- **Adaptable:** Activate pre-built playbooks according to your organizational business process needs.

THE CHALLENGE

Complying with laws and regulations such as FISMA, HIPAA, GDPR, and the hundreds of other laws that organizations face can be overwhelming. In addition to compliance, information security risks have never been more severe. With a dynamic threat and regulatory landscape, maintaining an acceptable level of risk is virtually impossible for most organizations. Ignyte provides the assurance you need to manage your program with confidence.

Integrated GRC

Integrate seamlessly with other applications and existing business processes.

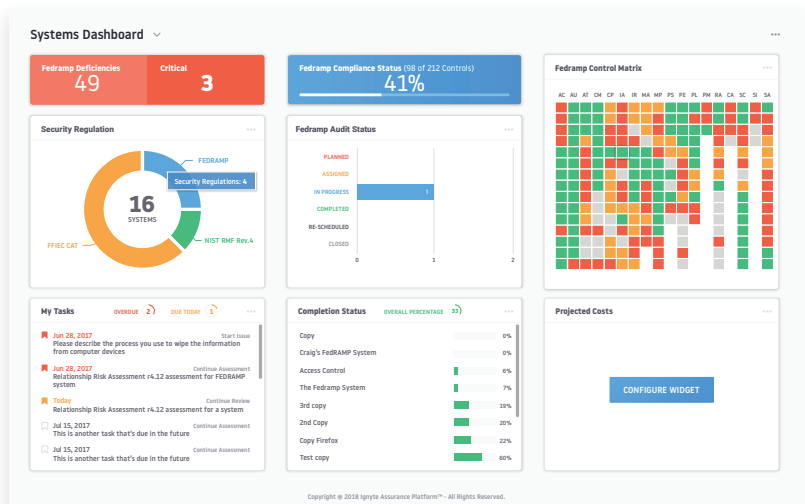

Cut Costs, Not Corners

Reduce errors, improve efficiencies and reduce security management costs overtime.

Time to Value

Ignyte Assurance Platform is built from the ground up by seasoned experts to get to value fast.

Customize your dashboard according to your business needs and management objectives.

KEY BENEFITS

Compliance

Ignyte simplifies and makes compliance more effective through the delivery of optimized workflows and by the application of controls pre-mapped to all major regulatory frameworks. These can be extended for specific contractual compliance needs.

Emerging Threats

Ignyte maintains an accurate inventory of applications as well as vulnerabilities affecting applications and underlying infrastructure, to enable prioritization of remediation and enhancement activities, thereby more effectively addressing cyber threats than traditional disparate systems. Ignyte allows your team to focus on threat hunting rather than manual and labor-intensive, traditional threat and vulnerability management processes.

Risk

More effectively manage enterprise and vendor risk with proven workflows, monitoring and governance. Ignyte automates risk management processes ensuring that risks are addressed according to their residual severity.

THE IGNYTE ASSURANCE PLATFORM[™]

The Ignyte Assurance Platform[™] was developed from the ground up to simplify ever-changing information security and compliance challenges. It does this by creating a system based on a distributed state-of-the-art architecture to deliver a centralized IT governance, risk, and compliance management system. The Ignyte Assurance Platform[™] automates critical information security functions to allow you to proactively address risk.

MODULES AND APPLICATIONS

Corporate Compliance & Policy Management

The corporate compliance module allows you to manage, measure, and cross map regulations, standards, and guidelines using the translation engine. Simplified mapping is used to create compliance workflows for your entire organization. The module streamlines the policy authoring, approval, and publication process through ready-to-use content and workflows. It further simplifies governance by linking policy statements with standards and procedures in a pre-defined hierarchy.

Audit Management

The Audit Management module streamlines the audit process by automating repetitive tasks, such as annual or triennial audits and tracking open findings in remediation through robust workflows. Ignyte Assurance Platform customers have experienced a significant reduction in the cost of maintaining an internal audit function.

Predictive Threat Modeling

The Threat Modeling capability enables the creation of accurate and re-usable models of networks, processes, systems, and applications to enable identification of threat vectors as well as latent vulnerabilities. The Ignyte Predictive Threat Modeling module provides a virtual representation of your systems that can be used to run what-if scenarios or simulate the impact of a security breach.

Cyber Risk Management

This module enables the creation of qualitative and quantitative risk assessments using data imported from other modules or other systems with just a few clicks. The Ignyte Cyber Risk Management module simplifies risk management providing unparalleled flexibility in customizing risk metrics as well as remediation workflows.

Operational Risk Management

Based on ISO 31000, the Ignyte Operational Risk Management module automates risk identification, analysis, identification, and treatment processes. The Operation Risk Management module features workflows as well as stunning visualizations and metrics to enable ongoing risk management.

KEY BENEFITS CONT.

IT Governance

Enable IT governance across your entire organization through IT procedure workflows and policy management. Ignyte provides the foundation for your IT governance program by standardizing critical IT procedures and automating policy compliance tracking.

IT Audit

Reduce IT audit costs through automated workflows and audit evidence collection. Ignyte was designed to streamline the audit process from planning, through execution, to close-out, eliminating the need for worksheets, and most manual processes. Additionally, it improves the integrity of control.

Vendor Risk Management

Create a comprehensive vendor governance program with Ignyte's Vendor Risk Management module. Features include: Internal and public portals, shared assessment questionnaires, automated risk grading, remediation workflows, and customizable vendor risk reporting. Delivering consistent, efficient, and all-encompassing vendor management capabilities.

Business Continuity Management

The Business Continuity Management module was created to simplify business impact analysis, assist planners in determining recovery time objectives, recovery point objectives, and facilitate periodic recovery exercises. Thereby ensuring that your business continuity plans are developed, tested, and maintained in accordance with industry-best practices.

Integration & Development

Our company has a long history of performing systems integration projects for Department of Defense and several prestigious companies globally. Ignyte brings this experience to enterprise level by providing several, pre-built integrations and a custom data pipeline, which is built specifically to solve cybersecurity, eco-system challenges within the organization. Thereby enabling system re-use and speed to maturity via a greenfield solution.
